

INTRODUCING THE GPS150 DUALNAV™ SENSOR

Digital Yacht's GPS150 with DualNav™ technology is all about next generation navigation. Switchable between GPS and GLONASS based systems, the GPS150 offers unprecedented accuracy and reliability whilst allowing compatibility with legacy marine products and the latest generation of systems. For slow moving as well as very high speed vessels, the TurboNav mode with 10Hz updates and a superfast 115200 baud connection will give you the best possible navigation experience on your plotter.

So whilst the ale may still make for Captain's Trouble, the GPS150 brings true, next generation navigation to your on board electronics.
